

January 19, 2005

Dear Industry Partners:

The enclosed document provides the preliminary list of Serving Wire Centers through which service will be provided to Agency customers under the Networx Universal contracts. While this list was provided to Government agencies for review and their additions and deletions have been incorporated, requirements could change and the Federal Technology Service (FTS) could add or remove locations as necessary to address the most current Government requirements.

All of the wire centers identified will provide continuity for current Federal Government users or have a reasonable probability of being called into service during the Networx Universal contract period. This wire center listing will allow potential offerors to begin comparing capabilities to the Government's projected needs in order to make decisions regarding how those needs can be met.

This listing was produced with the cooperation and participation of representatives from most major Government agencies. Please understand that FTS will continue to work closely with these representatives to adjust this profile as necessary prior to issuance of the final Networx Universal Request for Proposal.

Please direct any questions concerning this document to the Networx Contracting Officer, Mr. Jack Braun, at (703) 306-6423 or jack.braun@gsa.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Sandra N. Bates".

Sandra N. Bates
Commissioner
